

PracticePro

Complete Feature & Workflow Catalog

A comprehensive reference of every feature, workflow, and capability across the PracticePro platform — Vega (Legal), Atrium (Property), and Komplete (Unified).

Version 1.19.0 | July 2026 | PracticePro Systems Limited

Table of Contents

1. Legal Practice Management (Vega)	10 features
2. Property Management (Atrium)	7 features
3. Unified Messaging Hub	6 features
4. Task Intelligence	6 features
5. Portal & External Access	4 features
6. AI & Research	4 features
7. Billing & Subscription	4 features
8. System & Platform	7 features

1. Legal Practice Management (Vega)

Matter Management

Create, track, and close legal matters with customizable workflow stages. Each matter type has its own stage pipeline (e.g., Intake → Drafting → Review → Execution → Closed). Matters can be linked to clients, courts, and documents.

Matter Stage Tracking

Visual stage tracker on the matter detail page shows progress through workflow stages. Click any stage to advance. Stage changes are timestamped and logged.

ALOA AI Assistant

AI-powered legal assistant that can draft documents, create workflows, analyze documents, research case law, and navigate the app. Supports file uploads and live web querying.

DraftPro Editor

Full-featured document editor with AI drafting, watermarks (DRAFT, CONFIDENTIAL), page numbering, focus mode, DOCX export, and print preview. Opens in dedicated tabs on desktop.

Court Date Reminders (Pro)

Automatic WhatsApp reminders 7, 3, and 1 days before court dates for Vega Pro firms. Duplicate-prevention guard prevents spam on rescheduled matters.

Retainer Auto-Billing

Automated retainer billing with configurable frequency (Weekly, Monthly, Quarterly, Bi-Annually, Annually). Draft invoices auto-stage in the Billing Monitor for review.

Billing Monitor

Dashboard for reviewing staged retainer invoices. Approve & Send, Pause to Edit, Skip Cycle, or Retry Failed sends. Premium-gated (Vega Growth+).

Time & Expense Tracking

Log billable hours and expenses against matters. Items appear in invoice generation when unbilled. Supports hourly, fixed-fee, and retainer billing models.

Invoice Generation

Create invoices from unbilled time entries and expenses. PDF generation with firm letterhead. Payment tracking with Paystack-ready integration.

Compliance (Coming to Settings)

NDPA 2023 compliance tracking, PIA assessments, and data protection workflow. Being moved from standalone page to Settings.

2. Property Management (Atrium)

Property & Unit Management

Create properties with embedded units. Track occupancy status, rent amounts, service charges, and tenant information. Multi-unit buildings supported via embedded units array.

Rent Collection

Collect rent with automated receipt generation. Track payment status (Paid, Pending, Overdue). Ledger entries automatically created for each transaction.

Service Charge Tracking

Track service charges per property/unit. Generate service charge invoices. Monitor outstanding balances.

Eviction Workflow

Statutory eviction tracking: Quit Notice → 7-Day Notice of Owner's Intention to Recover Premises. Auto-calculated notice periods based on tenancy frequency. DraftPro integration for generating legal documents.

Visitor Management

Gated estate residents generate 6-digit visitor access codes. Gatekeepers verify at the gate. Dual WhatsApp delivery, offline fallback, grace periods.

Defaulter Dashboard

Live dashboard showing tenants with outstanding rent. Automated WhatsApp demand notices. Late fee calculation.

SCE Calculator

Service Charge Equivalent calculator on the landing page. Models portfolio economics to show if Atrium makes financial sense for a given property portfolio.

3. Unified Messaging Hub

Unified Conversations Inbox

All conversation types in one list: Team chat, Portal messages, Maintenance tickets, Service requests, Inbound WhatsApp/Email. Color-coded badges (Team=indigo, Portal=emerald, Ticket=amber, Request=rose).

Team Chat

Direct messages between team members with server-side atomic notification dispatch. Message context menu (Copy, Edit, Delete on own messages). File attachments via Convex storage.

Portal Conversations

Two-way chat with clients and residents via their portal. Inline ticket controls (status pills, assign-to-team-member). Sub-threading per ticket.

Notice Board

Post notices visible to residents/clients on their portal. Property-scoped or global. Email notifications dispatched server-side. Archive/restore workflow.

Scheduled Messages

Schedule WhatsApp/Email messages for future delivery. View pending and sent scheduled messages in the Scheduled tab.

Smart Presence

Team member avatars show 3 states: Active (green), Inactive (amber), Offline (grey). 10-second grace period before offline avatars fade out. "Last seen Xm ago" on hover.

4. Task Intelligence

Task Segmentation

Tasks are segmented: Internal Team, Client, or Resident. Color-coded badges on Kanban cards (indigo=team, violet=client, amber=resident). Mandatory assignee — cannot create a task without at least one.

Kanban Board

Drag-and-drop task board with 4 columns: To Do, In Progress, Pending Review, Done. Overdue tasks highlighted in red. Priority indicators, checklist progress, assignee avatars.

Multi-Channel Notifications

Internal team: in-app notification only. External (client/resident): in-app + Email (default) + WhatsApp (if opted in). WhatsApp failure falls back to Email.

Task Verification Workflow

External stakeholders mark tasks as "Done" → routes to "Pending Verification" → team member reviews → moves to "Done". Prevents premature closure.

Halfway Reminders

Automated reminder at the midpoint between task creation and due date. Guardrail: if <2h total duration, schedules 30-min final reminder instead. Snooze/acknowledge support.

Overdue Automation

Tasks past their due date get red highlight on cards. Creator receives "Task Overdue" notification automatically.

5. Portal & External Access

Client Portal (Vega)

Clients log in to view their matters, documents, messages, service requests, and financials. Can submit service requests with file attachments. Card-based dashboard.

Residents' Portal (Atrium)

Residents log in to view notices, visitors, ledger, receipts, maintenance tickets, messages, payments, and documents. Can submit maintenance tickets with photos/videos.

Portal Invite System

Admins generate portal invites for clients/residents. Unique access tokens. Pending invites tracked. Invite acceptance flow with password setup.

Multi-Tenant Onboarding

Firms invite team members with role-based access (Admin, Lawyer, Paralegal, Manager). Pending users show in a dedicated queue until an admin grants access.

6. AI & Research

ALOA/ARIA Chat

AI assistant with 4 modes: Auto, Flash, Pro, Research. Supports file uploads (PDF, DOCX, images), live web querying, and document analysis. PII shield with visible badge.

Research Studio

Dedicated research environment with notebooks, sources, and AI-powered analysis. Push web results from ALOA to Research Studio. Strategy studio for case strategy development.

ALDIA Document Analysis

Deep semantic document analysis with risk scoring, metadata extraction, and PII detection. Integrated with ALOA for context-aware analysis.

Legal Intelligence Modules

Lagos HC Rules, FHC Rules, NWLR. Hosted natively in Convex for fast, bandwidth-efficient research. Procedural awareness for Nigerian court rules.

7. Billing & Subscription

3-Tier + Enterprise Pricing (Atrium)

Core: ₦490K/yr (10 units, ₦2,700/unit/mo overage). Growth: ₦965K/yr (25 units, ₦2,100/unit/mo). Pro: ₦2.1M/yr (100 units, ₦1,600/unit/mo). Enterprise: Custom (400+ units).

Paystack-Ready Billing

Provider abstraction layer with manual provider (default) and Paystack provider (dormant, ready to activate). Webhook routing with idempotency keys.

Invoice Management

Create, send, track invoices. PDF generation with letterhead. Payment status tracking. Paystack payment integration (one-shot invoice payment).

Subscription Management

Tier-based feature gating. WhatsApp quota enforcement. Plan upgrades with capacity re-sync.

8. System & Platform

Dark Mode (Complete)

Every modal (36 files), every page, every component has proper dark mode variants. Shared Modal primitive is dark-mode aware.

Auto-Expanding Chat Input

Gemini Mobile-style input that expands line-by-line up to 3 lines, then scrolls. Consistent across team chat, ALOA, research, and portal replies.

Version Check & Auto-Refresh

Detects new deploys via version.json polling (every 60s). Prompts user to refresh. 3-layer protection: manifest status + CI smoke test + client gate. Never prompts to refresh into a broken build.

APK Update Notifications

Android users see a banner when a new APK is available. Version manifest exposes build SHA and health status.

Dynamic Policy Versioning

Terms acceptance banner only shows when legal docs version changes. Semantic versioning (LEGAL_DOCS_VERSION). Standard reloads don't trigger the banner.

Layout-Aware Onboarding Tour

Mobile: bottom-sheet anchored above nav bar. Desktop: side-anchored tooltip with arrow. Viewport changes mid-tour handled gracefully.

Comprehensive Usage Policy

15-section policy covering acceptable use, account security, AI features, portal access, communication, payments, IP, compliance (NDPA 2023), and Nigerian governing law.

Summary

Total modules: 8

Total features: 48

PracticePro is a comprehensive practice management platform for Nigerian law firms and property managers. It combines legal practice management (Vega), property management (Atrium), and a unified product (Komplete) that includes both.
